

Hibernate Assignments

1. Suppose there is hierarchy of entities Vehicle, Car, Bike where Vehicle is a base class for Car & Bike. Write hibernate application to map these entities into database using 3 strategies:
 - a. Table Per Hierarchy
 - b. Table Per Concrete class
 - c. Table Per Subclass
2. Prove that first level caching is at session level whereas second level caching is at session factory level.
3. Create a console based chatting application where complete data including chatrooms, messages, userlist is stored into database tables instead of collection classes. Design tables & manipulate them using hibernate.
